

## Electrical fire hazards may be lurking in your home

**A**n electrical fire gives no warning. A house may seem fine for decades, with no concerns. Then out of seemingly nowhere, without warning, a fire breaks out in the home from an electrical fault.

Probable culprits:

- Deterioration
- Faulty circuit breakers
- Hazardous DIY add-ons
- Alterations
- Build-up of cobwebs in electrical boxes

Electrical fires can be prevented. Older homes should be checked thoroughly for electrical safety, by an expert. Electrical fire hazards are usually not obvious. **Identifying hidden fire hazards requires electrical testing by experts.**

As homes get older the risk of electrical fire increases. Did you know that the number of deaths due to fire is twice as high in houses built pre-1975 than in houses built since 1975. If your house was built before 1975, have a PowerCheck electrical safety checkup now, to find any hidden electrical fire hazards.

A PowerCheck electrical safety examination is inexpensive and a smart action to take

- For insurance
- For your safety
- For your peace of mind
